EF → Entity Framework

ORM

Object Relational Mapping

ExD

CD

Name	Data type
1 CategoryId	INTEGER
2 CategoryName	nvarchar (15)
3 Description	"ntext"
4 Picture	"image"

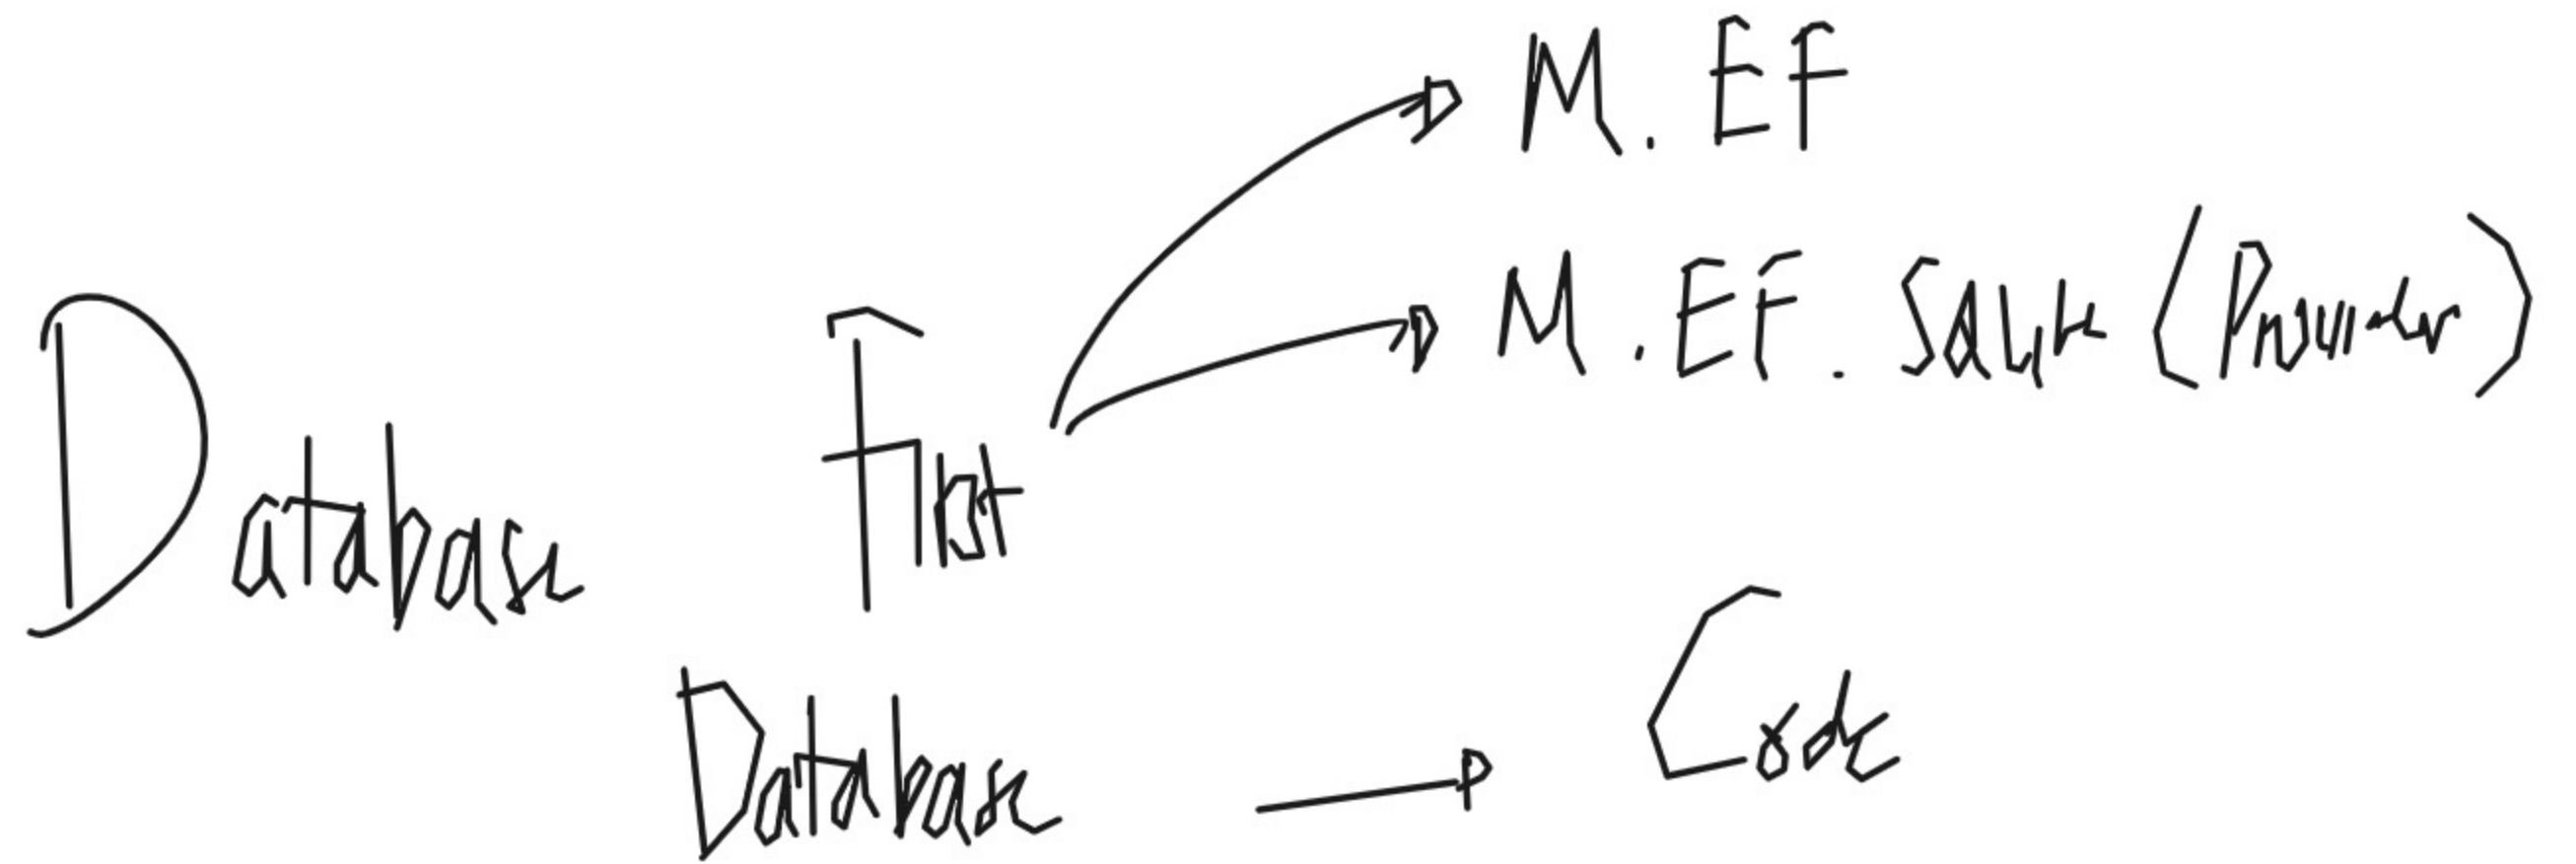

```
class Category
{
    public int CategoryId {get; set;}
    public string Category Name {get; set;}
    public string Description {get; set;}
}
```

LINQ

Language Integrated

Query

Approach

Modeling / Code first

①

Naming

Convention

Class Name / d

→ PK

Other Class / d

→ FK

②

Attribute

③

Fluent API

+ Loading

Migration → Migratz

Code → Database

① dotnet ef → tool dotnet

dotnet tool install --global dotnet-ef

② Microsoft EF Design → NuGet

Create migration files:

- dotnet ef migrations add "message"

Apply migration :

- dotnet ef database update

Git Flow

branch ?
